

1. Create a folder called **assignment2** inside it create four folders **css**, **fonts**, **images**, **webfonts** and create a file **index.html**, let your folder structure look like the picture below, make sure the casing of the folder names are the same as seen on the screenshot

2. Link the **fontawesome** css file at the head section of the html and create a css file called **style.css** in the **css** folder and link it in the head section of the html. Make sure you import your custom fonts in the **style.css** file

3. Use background image to import the burger the image at the top as seen on the screenshot
4. Convert the **Abel**, **Pinyonscript** fonts to a web safe font and add the **Abel** font on the body tag so that every other element will inherit it.
